Vivekanandha Educational Institutions

Vivekanandha Educational Institutions (VEI) is a prominent group of Educational Institutions located in Elayampalayam, Tiruchengode, Namakkal District, Tamil Nadu. Founded in 1987 under the Angammal Educational Trust by "Vidhya Rathna" Prof. Dr. M. Karunanithi, VEI has grown into a comprehensive network of institutions dedicated to empowering women through education. With a mission to impart quality education and foster holistic development, VEI has become a beacon of academic excellence in the region.

VEI encompasses a wide array of colleges and schools offering programs in Engineering, Medicine, Pharmacy, Nursing, Physiotherapy, Arts & Sciences, Education, Management, and Health sciences. The institutions are primarily focused on women's education, striving to create an environment that promotes intellectual growth, ethical values, and leadership. The main campus is situated along the Erode–Namakkal state highway, approximately 6 km from Tiruchengode, 26 km from Erode, and 30 km from Namakkal, providing students with a peaceful and well-connected learning atmosphere.

VEI offers a diverse range of academic programs across Undergraduate, Postgraduate, Diploma, and Doctoral levels. These programs span various disciplines and are tailored to meet evolving industry and societal needs. The Institutions under VEI are recognized and approved by regulatory bodies such as AICTE, UGC, NCTE, MCI, PCI, INC, DCI and DIMH. They are affiliated with esteemed universities, including The Tamil Nadu Dr. M.G.R. Medical University, Anna University, and Periyar University. Accredited by NAAC and NBA, VEI upholds the highest standards in academic quality, infrastructure, and student outcomes.

About VICAS

Vivekanandha College of Arts and Sciences for Women (Autonomous) was established in the Year 1995. Angammal Educational Trust Chaired by the great Educationalist 'Vidhya Rathna' Prof. Dr. M. KARUNANITHI, B.Pharm., M.S., Ph.D., D.Litt., sponsors this college and other institutions under the name of the great Saint Vivekanandha. These institutions are situated on either sides of Tiruchengode-Namakkal Main Road at Elayampalayam, 6 kms away from Tiruchengode. This is one of the biggest women's colleges in India with more than 5500 girl students and 19 departments. The strength of the college was just 65 at the time of its establishment. With the dedication, hard work, sacrifice and long vision of the Chairman, it has grown by leaps and bounds. The college is approved by UGC and AICTE. The college was granted Autonomous status in recognition of its consistent academic excellence and outstanding performance and re-accredited with "A+" Grade by National Accreditation and Assessment Council (NAAC). The college is an ISO 9001-2015 Certified Institution. The college has earned national recognition for excellence in cleanliness and hygiene, receiving the 'Swachhta Ranking' from the Ministry of HRD under the Swachh Bharat Abhiyan and ranking 5th in the Swachh Campus Ranking for Residential Colleges by UGC. The Institution has also been awarded a prestigious 4-Star rating by the Institution Innovation Council, Government of India, for its outstanding efforts in fostering innovation.

Why Zoology @ VICAS

- **DST-FIST Scheme :** Awarded by FIST Scheme, Department of Science and technology, Government of India for its commitment to quality education and research.
- **Research Opportunities:** Focuses on diverse areas like Biodiversity and its conservation, Toxicology, Radiation Biology, and Entomology with faculty and students actively engaged in research.
- **Practical Training:** Provides hands-on training in fields such as Poultry farming, Vermiculture, apiculture, sericulture, and more, enhancing employability.
- **Field and Industrial Exposure:** Organizes academic field visits and industrial visits to offer real-world experience.
- **Experienced Faculty:** The department is led by qualified educators, including experienced professors with notable academic and research backgrounds.

ANALYTICAL CHEMISTRY OF WATER

Impact of Water Quality Changes on Harbour Environment (Kasimedu and Ennore), Due to Port Activities of Chennai District, India

P. Nithya[a,*], B. Dhanalakshmi[b], and P. Santhanam[c]

[b] PG and Research Department of Zoology, Nirmala College for Women (Autonomous), Coimbatore, Tamil Nadu, 641018 India

[c] Department of Marine Science, School of Marine Sciences, Bharathidasan University, Tiruchirappalli, Tamil Nadu, 620024 India

*e-mail: nanthujen@gmail.com

Received June 19, 2022; revised October 3, 2022; accepted November 10, 2022

Abstract—Water quality parameters were analysed in complex aquatic ecosystem of two major harbour waters (Ennore Fish Landing Centre and Royapuram Fishing Harbour), along the at Chennai district. Monthly variations in water physicochemical parameters such as atmospheric temperature (26–34°C), surface water temperature (23.2–33.5°C), pH (7.3–8.12), salinity (28.0–33.5 psu) and dissolved oxygen (3.2–5.6 mg/L) were analysed in the selected harbours. The inorganic nutrients such as nitrate (0.042–0.18 mg/L), nitrite (0.070–0.096 mg/L) phosphate (0.078–0.097 mg/L), silicate (0.480–0.780 mg/L) and ammonia (0.040–0.158 mg/L) were estimated in selected study site. The water quality parameters have obtained important seasonal and spatial variations. The increased harbour activities in both the selected harbour have been made the noticeable water quality changes. The obtained results evidently insisting the necessity of continuous monitoring of harbour waters. The present work was contributed in the harbour water quality monitoring and impact assessment for further policy mitigation measures.

INTRODUCTION

Ports are important means of cheap transportation of cargo, oils, chemicals, machinery etc., and are highly economical to the nation. India has many small, medium and large ports along its coast; some of which are provided with natural harbours. In port areas or in their vicinity several activities, such as fisheries, industrial installation, storage of hazardous materials, may cause further environmental impact [1]. Recent past studies have shown that increasing port activities in India have contributed to increases in the concentration of toxic heavy metals, petroleum hydrocarbons, phenols, and many other toxic compounds in harbours, which can affect the physico-chemical characteristic of environments to varying degree [2].

The quality of water in any ecosystem provides significant information about the available resources for supporting life in that ecosystem. The chemical composition of surface waters is derived from atmospheric, soil and rock sources. The relative contribution to surface waters from each of these sources is a function of the climate being modified increasingly by human activities [3]. Owing to the rapid industrialization on one side and exploding population on the other side, coastal and marine ecosystems in the present world are being severely affected by rapid growth of intensive urbanization in coastal regions. Most of the industries in the world are settled in coastal belts of the countries, especially, around major commercial harbours due to ease of trade, which contribute to severe pollution. Polluted sea water affects the ecological system of marine environment. Hence, pollution in marine environments had become one of the serious issues expanding all over the marine ecosystem from deep sea to coastal waters. Seawater pollutant is a chemical substance present in it at the excessive levels capable of causing harm to living organisms. Many industrial processes produce heavy metals and trace elements as by-products and they are

International Journal of Mosquito Research

Larvicidal and pupicidal properties of *Coccinia grandis* gourd fruits against malaria transmitting vector *Anopheles stephensi* and dengue transmitting vector *Aedes aegypti*

Sreeshivani M, Gayathri RP, Raja S, Premalatha P, Saravanan K, Vasanthakumar D, Satheeshkumar G, Nithya P, Jayaprakash S and Karuppannan P

DOI: https://doi.org/10.22271/23487941.2024.v11.i1c.758

Abstract

Plant based natural control of vector mosquitoes is very important to prevent the environmental toxicity caused by insecticides used to control the mosquitoes. Thus, in the present research was aimed to study the larvicidal and pupicidal properties of different extracts of fruit of *Coccinia grandis* gourd against malaria vector *Anopheles stephensi* and dengue vector *Aedes aegypti*. The fourth instars larvae of *A. stephensi* and *A. aegypti* were used for larvicidal activity and kept a container containing 249 ml of distilled water and 1ml of known concentration of plant extracts and incubated for 24 hours. The mortality rate of larvae was observed at every 3 hours and recorded. Pupae of *A. stephensi* and *A. aegypti* were placed a container containing 249 ml of distilled water and 1ml of desired concentration of plant extracts and incubated for 24 hours. The mortality of pupae was observed at every 3 hours and recorded. Different extracts of fruit of *C. grandis* gourd possessed potential larvicidal and pupicidal activity against malaria vector *A. stephensi* and dengue vector *Aedes aegypti*. It was due to the presences of phytocompounds such as tannin, saponin etc. Different extracts of fruit of *C. grandis* gourd possesses larvicidal and pupicidal activity against malaria transmitting vector *A. stephensi* and dengue transmitting vector *Aedes aegypti*. Thus the fruit of *C. grandis* gourd was might be useful for control of mosquitoes after the details experiments.

Keywords: Malaria, Dengue, *A. aegypti A. stephensi, Coccinia grandis*, Phytochemicals, Larvicidal and pupicidal

Introduction

Mosquitoes are the most important bloodsucking arthropods that transmit many of the diseases to the human being. It carries the microbes that cause the diseases than any other arthropods and affects millions of people worldwide. WHO has declared that the mosquitoes are "number one public enemy" and act as a major problem for public health [1, 2]. They can transmit most life threatening diseases like malaria, dengue, chikungunya, filariasis, yellow fever, encephalitis, West Nile virus infection, etc., in almost all parts of the world. Among communicable diseases, malaria is the third most killing diseases in the world. The World Health Organization (WHO) reported that malaria, human immunodeficiency virus (HIV), and tuberculosis are the three major infectious diseases throughout the world [3]. It infecting approximately 300-500 million peoples every year [4]. In 2015, WHO reported 214 million malaria cases in the world and 438000 deaths due to this disease. Unfortunately, approximately 70% of malaria deaths occur in children less than five years of age [5].

Dengue is fastest re-emerging diseases that greatly affects the economy and health of developing and developed countries [6]. It is an acute viral disease that caused by a single-stranded RNA virus that belongs to the *Flaviviridae* family. They may lead to severe manifestations like DSS or DHF [7, 8]. There are about 390 million people were infected by dengue every year and of which 96 million cases showed significant clinical symptoms against
